

Adani Renewables Australia

Jennifer Purdie
Chief Executive Officer

Today's Agenda

- 'Australia's energy mix working for all Australians' – is this achievable?
- How can energy users influence towards a sustainable policy environment?
- What are energy users doing to reduce their electricity costs in the current context?

The Australian Market

How do we transition our energy mix to move towards sustainable energy outcomes while delivering competitive advantage to our nation and economy from our diverse high quality energy resources?

Our Common Goal

- We need a globally competitive energy price from a mixture of generation types.
- System reliability is important and demand response can work for customers
- Emissions intensity must decrease over time
- We need a customer-focused model that works for all Australians.

A plan for infrastructure development

- An integrated plan for future infrastructure development is important.
- What is the true lowest cost trajectory?

Managing electricity costs – what are the options?

Behind the meter

Integrated solutions for customers behind the meter using bespoke methods provide new opportunity to reduce costs.

In summary

- Industry needs to put the customers front of mind when developing energy solutions.
- We need to support customers looking for bespoke solutions to reduce their energy costs.
- Let's focus on delivering an energy mix that works for all Australians, big and small.

Thank you
